

Why Choose Eli Innovation?

With over 10,000 Eli units now installed across Australia, New Zealand and China, more and more farmers are discovering the benefits of a locally engineered milk harvesting system.

Based in Gippsland, the heart of Australia's dairy industry, Eli's product engineers are on the ground in dairy parlours daily, providing technical support and listening to the changing needs of farmers.

Together we develop considered, customised solutions to increase the quality, efficiency and ultimately the profitability of local daily farmers.

ELI INNOVATION

Quality Australian Made Dairy Solutions

Stand Alone Milk Meters (SAMM)

Connects to most brands of cup removers

Records milk volume, duration and conductivity

Optional keypad for live volume display

Eli Stand Alone Milk Meter (SAMM)

SAMMs are a simple add-on to your existing cup removers, interfacing with brands such as Waikato and more, to keep your investment in place.

Capturing volume, duration and conductivity from each cow, data is then sent to a herd management system for review. They integrate with Australian herd management software including MISTRO, Jantec and more.

You can use real-time information to test and measure the effect of variables, such as feed and routine, to achieve maximum output from input.

Eli Stand Alone Milk Meter PRO (SAMM PRO)

The SAMM PRO differentiates itself from the standard SAMM by taking full control of an existing installed ACR. The SAMM PRO can be interfaced with brands such as DeLaval, GEA, Boumatic and more, to keep your investment in place.

There is no need to replace your existing hardware as the SAMM PRO not only captures volume, duration and conductivity data from each cow, but it also provides high level control of the ACR. The SAMM PRO adds functionality such as customisable let down delays, maximum milking durations and vacuum blocking to your existing hardware.

Eli SAMM PROs are already installed in Australia and China.

Product Specifications

Units are safe, low voltage and low power consumption, made largely from recyclable materials.

Both SAMM and SAMM PROs can operate alone or be networked, for ease of parameter changes and to future-proof your system for software upgrades.

A fully pluggable design makes installation quick and easy.
